Pain Management - Adult

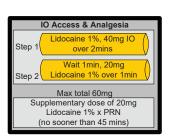

Analogue or Visual Pain Scale
0 = no pain......10 = unbearable

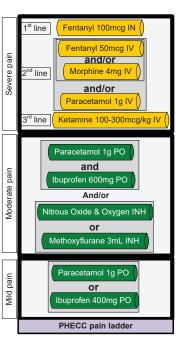

In the absence of acquiring IV access a second dose of IN Fentanyl may be administered.

Repeat Fentanyl IN once only at not <10min after initial dose PRN.

- Ketamine indicated if:
- Morphine or Fentanyl not adequate, or
- Painful extrication or procedure anticipated

administer
Amiodarone and
Lidocaine to the
same patient

Repeat Morphine 2mg at not <2min intervals PRN.
Max 16mg.
For musculoskeletal pain Max 20mg.

Repeat Ketamine PRN at not <10min

Poly-opiate administration should be avoided where possible – where multiple opiates are administered the highest standards of continued patient monitoring must be adhered to.

Repeat Methoxyflurane INH once only PRN.

If nausea following opioid administration Go to N&V CPG
